

SEC³URE Facility Reopening Guide

As the country prepares to re-open, healthcare facilities are faced with additional challenges related to managing the influx of non-employees that provide or support patient care. To help our SEC³URE facilities address these challenges and ensure the safest care environment possible, we have created this step-by-step guide.

Contact a customer support Hero to help craft a specific plan for your facility.

Contact Tracing

SEC³URE GO! (or the printed badge) is your facility's first line of defense against COVID-19. All checkins include details of each visit such as time, date, destination, email and phone. By enforcing the "No Badge, No Entry" rule, you can use the **SEC³URE Ethos** platform to trace contacts and provide exposure notifications when needed.

Access Management

Prepare to re-open your facility to services and procedures that have been put on hold by examining restrictions set at the onset of the pandemic, determining if there are populations to move from non-essential to essential and establishing timeframes to make the changes. The meeting generator in the **SEC³URE Ethos** can dynamically manage access based on visit types and needs.

Access Point Control

To ensure that your visitors are only entering through designated access points, all check-ins can be directed to one or more designated kiosks for temperature checks or other access restrictions in place. We can help you review your current kiosk locations to streamline entry points, and if feasible, migrate to using both **SEC³URE GO!** and Meeting Manager for check-ins.

Visitor Screening

The COVID-19 screening questionnaire in the **SEC³URE Ethos** evaluates symptoms and exposure at every check-in. We can turn it on for your facility to screen anyone that walks through the doors and restrict access to those who fail the screening. The screening results will be reported to your facility.

PPE Compliance

Your staff and patients are kept safe when non-employees who enter your facility comply with protection directives. With the **SEC³URE Ethos**, you can update and enforce your protection policy, such as who should get PPE from your facility for a fee, who should get it at no cost, and who should bring their own facility-approved PPE.

COVID-19 Policies

A concise policy updating the **SEC³URE Ethos** community on how to comply with your processes and procedures will help everyone stay on the same page, saving you time and effort of updating multiple policies. Such policy updates can be communicated to **SEC³URE Passport** holders instantly via our platform so that they are reviewed and accepted before a facility visit.

The safe reopening of your facility is a top priority for us. If you have any questions about this guide or need help to implement any of the steps, please reach out to one of our Heroes at **877-885-1420** or customerservice.ca@IntelliCentrics.com
